A TABLE

Telling how many Yards, Feet, and Inches in Length, and how many in Breadth, it will take to make an ACRE of Land.

The Explanation of the TABLE.

If a Piece of Land be 11 Yards and 9 Inches in Breadth, it must be 430 Yards and 8 Inches in Length for to contain an Acre of Land. Again, If the Breadth be 26 Yards 2 Feet, you will find the Length of the same for to be 181 Yards 1 Foot 6 Inches, which is the true Content of an Acre of Land. Again, If the Breadth of a Close be 90 Yards 2 Feet 3 Inches, you must go in Length 53 Yards 1 Foot, which is the true Content of an Acre of Land. Again, If the Breadth of a Close be 123 Yards 2 Feet 3 Inches, you must go in Length 39 Yards and 4 Inches, which is the true Content of an Acre of Land.
